

Announcing a Symposium

GLOBAL WARMING: A THERMODYNAMIC PERSPECTIVE RELATING EARTH, SUN, AND THE BUILT ENVIRONMENT

in the series

Designing for Human Comfort
and Energy Efficiency

Topics include:
Global Thermodynamics
Heat Generation & Heat Reduction
Sustainable Techniques
Cost-Saving-Triple Bottom Line
Productive Work Environments

Participants to receive:
1 Con. Education / Prof. Dev Credit Hr.
1 Global Warming Position Paper

DATE:
TO BE ANNOUNCED

11:40 Sandwiches (\$10 donation requested)

12:00 - 1:00 Presentation & Discussion

PLEASE RSVP @

MECHANICAL ▲ ELECTRICAL ▲ HVAC ▲ ENERGY ▲ INDUSTRIAL HYGIENE & VENTILATION
INDOOR AIR QUALITY ▲ NOISE & VIBRATION ▲ INTEGRATED DESIGN ▲ PHYSICAL PLANT
STUDIES ▲ PERFORMANCE TEST & BALANCE ▲ COMMISSIONING ▲ SYSTEMS OPERATION

- ▲ The laws of Physics and Thermodynamics: What goes in must come out or we will overheat.
- ▲ Heat input can be relieved through radiation to the atmosphere.
- ▲ Cooling will be retarded by greenhouses.
- ▲ The net heat gain must be reduced by solar harvesting and generating less heat.
